Hi Dave,

I've attached the input files required for the TOD-S long file. Please take a look and we can discuss when we meet on Monday if something isn't clear or if you need anything else from me.

The columns (in the attached outline) are as follows:

Norm_group: there are three – child age, child grade, adult

Test: this column includes tests and indexes.

There are 4 tests: PV, LWC, WRF, and QRF. There is a separate look up table for each of these tests within each of the norm groups (except there are no adult scores for WRF).

There are 2 indexes: DRIW and DRIQ. There is a single (not age/grade stratified) look up table for each of the norm groups (except there are no adult scores for DRIW).

Age_grade is for indicating the age/grade group (e.g., 1st grade fall). This does not apply to index scores which have a single look up table for each of the 3 norm groups (there is no DRIW for adults)

rawscore is the total raw score for WRF and QRF and the ability score for PV and LW (raw to ability look up is a separate table because it is an earlier step)

SS

CI90

CI95

Percentile

equiv is age equivalent for child age norms and grade equivalent for child grade norms. There are no equivalents for adults.

Descrange is for all tests/indexes.

Risk is for DRIW and DRIQ only.

Do you think you'll be able to complete this by Fri 2/10?

Thanks so much,

Amber
